| <i>React.js, Node.js, Express.js, MongoDB, JWT, Nodemailer, Recharts, jsPDF, Python, Tailwind CSS</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                                         |
| <ul style="list-style-type: none"><li>• Built a <b>4-tier role-based</b> campus placement portal (Student / Placement Officer / Student Representative / Admin) on the <b>MERN stack</b> with <b>JWT authentication and Google OAuth</b>, managing end-to-end placement workflows for 500+ students across 50+ companies.</li><li>• Designed and exposed <b>30+ RESTful API endpoints</b> across student profiles, company listings, applications, and notifications, with <b>MongoDB compound indexes</b> cutting common query response times to under 50 ms.</li><li>• Engineered a multi-stage application tracking pipeline (Applied → Shortlisted → Interview → Selected/Rejected) with automated <b>email notifications via Nodemailer</b> and a <b>Python ML resume analyzer</b> (TF-IDF + cosine similarity) scoring candidate fit against job descriptions.</li></ul> |                                                         |

- Built a **Placement Officer analytics dashboard** with interactive **Recharts visualizations** (bar, pie, treemap) for branch-wise, section-wise, and company-wise placement stats, with **PDF export via jsPDF** for placement reporting.
- Integrated a **Gemini-powered AI chatbot** for real-time placement guidance and an **alumni connect module** enabling students to discover and reach out to alumni at target companies — consolidating all placement touchpoints in one platform.

### AI-Augmented Real-Time Messaging Platform

[Source Code](#) | [Live Demo](#)

*React.js, Node.js, Express.js, MongoDB, Socket.io, JWT, Tailwind CSS*

- Engineered a full-stack **MERN messaging platform** with **44 REST API endpoints** and Socket.io event handlers, supporting **100+ concurrent users** with sub-**150 ms** message delivery latency — zero third-party real-time SDKs.
- Shipped **12+ real-time and social features** from scratch across **17+ React components** — 1:1 DMs, group channels, threaded replies, typing indicators, read receipts, online presence, emoji reactions, file attachments, polls, 24-hr story posts, smart replies, and user blocking.
- Integrated **AI-powered semantic search and message summarization** (Gemini 2.5 Flash via SSE streaming) enabling natural-language queries across full channel history and on-demand thread digests, with **JWT authentication** and **3-tier RBAC** (Owner / Admin / Member) enforced across all 44 endpoints.
- Designed a normalized **MongoDB schema** (users, channels, messages, memberships) with compound indexes, reducing message-history queries from 200 ms to under **30 ms**.

### TECHNICAL SKILLS

---

**Languages:** Java, JavaScript, TypeScript, SQL, Go, C.

**Web & Frameworks:** React.js, Redux, Next.js, Node.js, Express.js, RESTful APIs, Tailwind CSS, HTML5, CSS3.

**Databases, Cloud & Tools:** MySQL, MongoDB, Git, GitHub, Postman, VS Code, Vercel, Render.
